Instruction manual
LeCroy PP005A

Revision B - January 2002
Warranty

LeCroy warrants this oscilloscope accessory for normal use and operation within specification for a period of one year from the date of shipment. Spare parts, replacement parts and repairs are warranted for 90 days.

In exercising its warranty, LeCroy, at its option, will either repair or replace any assembly returned within its warranty period to the Customer Service Department or an authorized service center. However, this will be done only if the product is determined by LeCroy's examination to be defective due to workmanship or materials, and the defect is not caused by misuse, neglect, accident, abnormal conditions of operation, or damage resulting from attempted repair or modifications by a non-authorized service facility.

The customer will be responsible for the transportation and insurance charges for the return of products to the service facility. LeCroy will return all products under warranty with transportation charges prepaid.

This warranty replaces all other warranties, expressed or implied, including but not limited to any implied warranty of merchantability, fitness or adequacy for any particular purposes or use. LeCroy shall not be liable for any special, incidental, or consequential damages, whether in contract or otherwise.
Introduction

The PP005A is a high impedance passive probe with a range of probing accessories. The micro-fine tip of all PP005A probes is spring-loaded, reducing the chance of "skiipping" the circuit once contact is established. Mechanical pressure is therefore reduced and probe life is enhanced. The micro-fine tip contributes to contact stability, in addition to making it easier to reach tightly placed circuitry.

![600 V CAT I 300 V CAT II]

Specifications

**Electrical Characteristics**
- **Attenuation**: \( \pm 10 \pm 1\% \)
- **Input resistance**: 10 M\( \Omega \) \( \pm 1\% \)
- **Input Capacitance**: 11 pF \( \pm 0.5 \) pF
- **Compensation Range**: 10 pF to 20 pF
- **Bandwidth**: 500 MHz typical
- **Max. Non-destructive Input Voltage**: 600 V (DC + peak AC) to 0.5 MHz

See voltage derating curve

**General Characteristics**
- **Operating Temp**: 0°C to 50°C
- **Cable length**: 1.2 m
- **Weight**: 200 g
- **Coupling**: 1 M\( \Omega \) AC/DC

Safety Certification

Designed to comply with IEC-1010, CAT I, CAT II Pollution Degree 2.

⚠️ Refer to this manual before using the probe.
**LF Probe Adjustment**

LF compensation is made by connecting the probe to the oscilloscope CAL connector and adjusting the compensation trimmer in the BNC box for optimum square wave response.

**HF Probe Adjustment**

HF adjustment may be accomplished with a 300 ps risetime generator by adjusting the two HF compensation resistors (located under the BNC box black plastic cap) to optimize rise time and overshoot.

- **Undershoot**
- **Correct**
- **Overshoot**

Sensitivity Ranges: [1 mV to 50 mV]

Sensitivity Ranges: [100 mV to 500 mV]

Sensitivity Ranges: [1V to 10V]

Safety Information
The probe is designed to be safe under the following conditions:
Indoor use
Altitude to 2000 m
Maximum relative humidity 80% for temperatures up to 31 °C decreasing linearly to 40% relative humidity at 50 °C

Warning
Do not disconnect probes while they are connected to a voltage source.

Cleaning
The exterior of the probe should be cleaned with a soft cloth moistened with either water or isopropyl alcohol.

Usage and Maintenance
The probe user should note that if the equipment is used in a manner not specified by the manufacturer, the protection may be impaired.
To guarantee accurate performance characteristics, mechanical shock should be avoided, as well as damage to the cable through excessive bending.
Handle with care especially when fitted with the extra thin springtip.
All maintenance should be referred to qualified personnel.
