

Frontline Test Services™

for Medical Applications

Training

knowledge and capabilities

- Technology training for managers
- In-depth training for engineers
- Use of test tools to an advanced level

Validation Testing

conformance with the specification

- Bluetooth Protocols - PTS
- RF testing Bluetooth Classic and LE- TLF3000
- HCI BLE testing - Harmony

App Testing

confidence across platforms

- Performance, functionality, UI and UX
- Intermittent or transitory issues and unexpected behaviors
- Security vulnerabilities and resilience to cyber-attacks

Product Launch

market readiness

- In-depth assessment to ensure interoperability
- Balanced approach to confidence versus time and cost
- Validation and correction of field issues

Teledyne LeCroy offers test and consultancy services to help in all stages of product development from Specification to Market Launch and beyond. Live results are available via a web interface. Teledyne LeCroy develops protocol analyzers and other test tools that are used by many manufacturers; this gives us a unique insight and experience into connectivity technologies such as Bluetooth® and Wi-Fi.

Interoperability Database

live results via secure website

- Supporting information: observations, logs and capture files
- In-built bug tracking or links to your system
- Database of phones and their features

Benchmarking

performance and usability

- Product analysis of features, user interface and user experience
- Competitive in customer surveys
- Competitor analysis for comparison and product improvements

Pre-production

confidence before launch

- Root-cause analysis (RCA) determines faults
- Improved battery life
- White lists of supported devices

Post-production

issues and feature additions

- Ensured interoperability against new or updated devices
- Increased market coverage
- Updates and new features do not compromise your product
